## **DETAILED ACTION**

### ***Priority***

The priority over the China application and the PCT is not granted since the sole inventor in the present application (Jifu Zhou) and the sole inventor in the PCT application (Xing Li) are different inventors. Applicant must correct this error in the response to this Office action.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

While the invention is claimed as a process of producing gasoline and diesel in the preamble, a step of producing these components is not recited in the claim.

Claim 5 should further be defined by reciting to where the catalyst is recycled.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1764

Claims 1, 5, and 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Xing (6,133,491).

Xing discloses a process for production of gasoline and diesel by twice catalytically cracking a residential trash/waste. The second cracking is carried out in a fixed bed (the abstract; the figure; col. 1, line 65 thru col. 2, line 43; col. 4, line 59; also see the entire patent for details).

Xing does not disclose that the waste is plastic (see the entire patent for details). However, the present residential trash is known containing a lot of plastics such as shopping bag. Therefore, it would have been obvious to one having ordinary skill in the art who wishes to reuse plastics for other use at the time the invention was made to have modified Xing process for processing plastic waste to arrive at the applicant's claimed process since it is expected that once the Xing process can be used for recycling the general waste, it can also be used for recycling plastic.

Recycling of the reusable catalyst is obvious to save the cost of material.

The condition such as temperature and pressure must be selected to operate the chemical process. Further, it is expected that using any condition, provided that, at which plastic can be cracked would yield similar result.

#### ***Allowable Subject Matter***

Claims 2-4 and 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
